

# IXOM

PROJECT PROFILE

## Project Overview

**Company:** Ixom

**Industry:** Water Treatment

**Location:** Nicholson Street,  
Melbourne

**Size:** 102 square metres

### Features Installed:

- FRP Flooring
- HDG Staircase

# IXOM

### The Problem:

Required an area to perform manufacturing tasks.

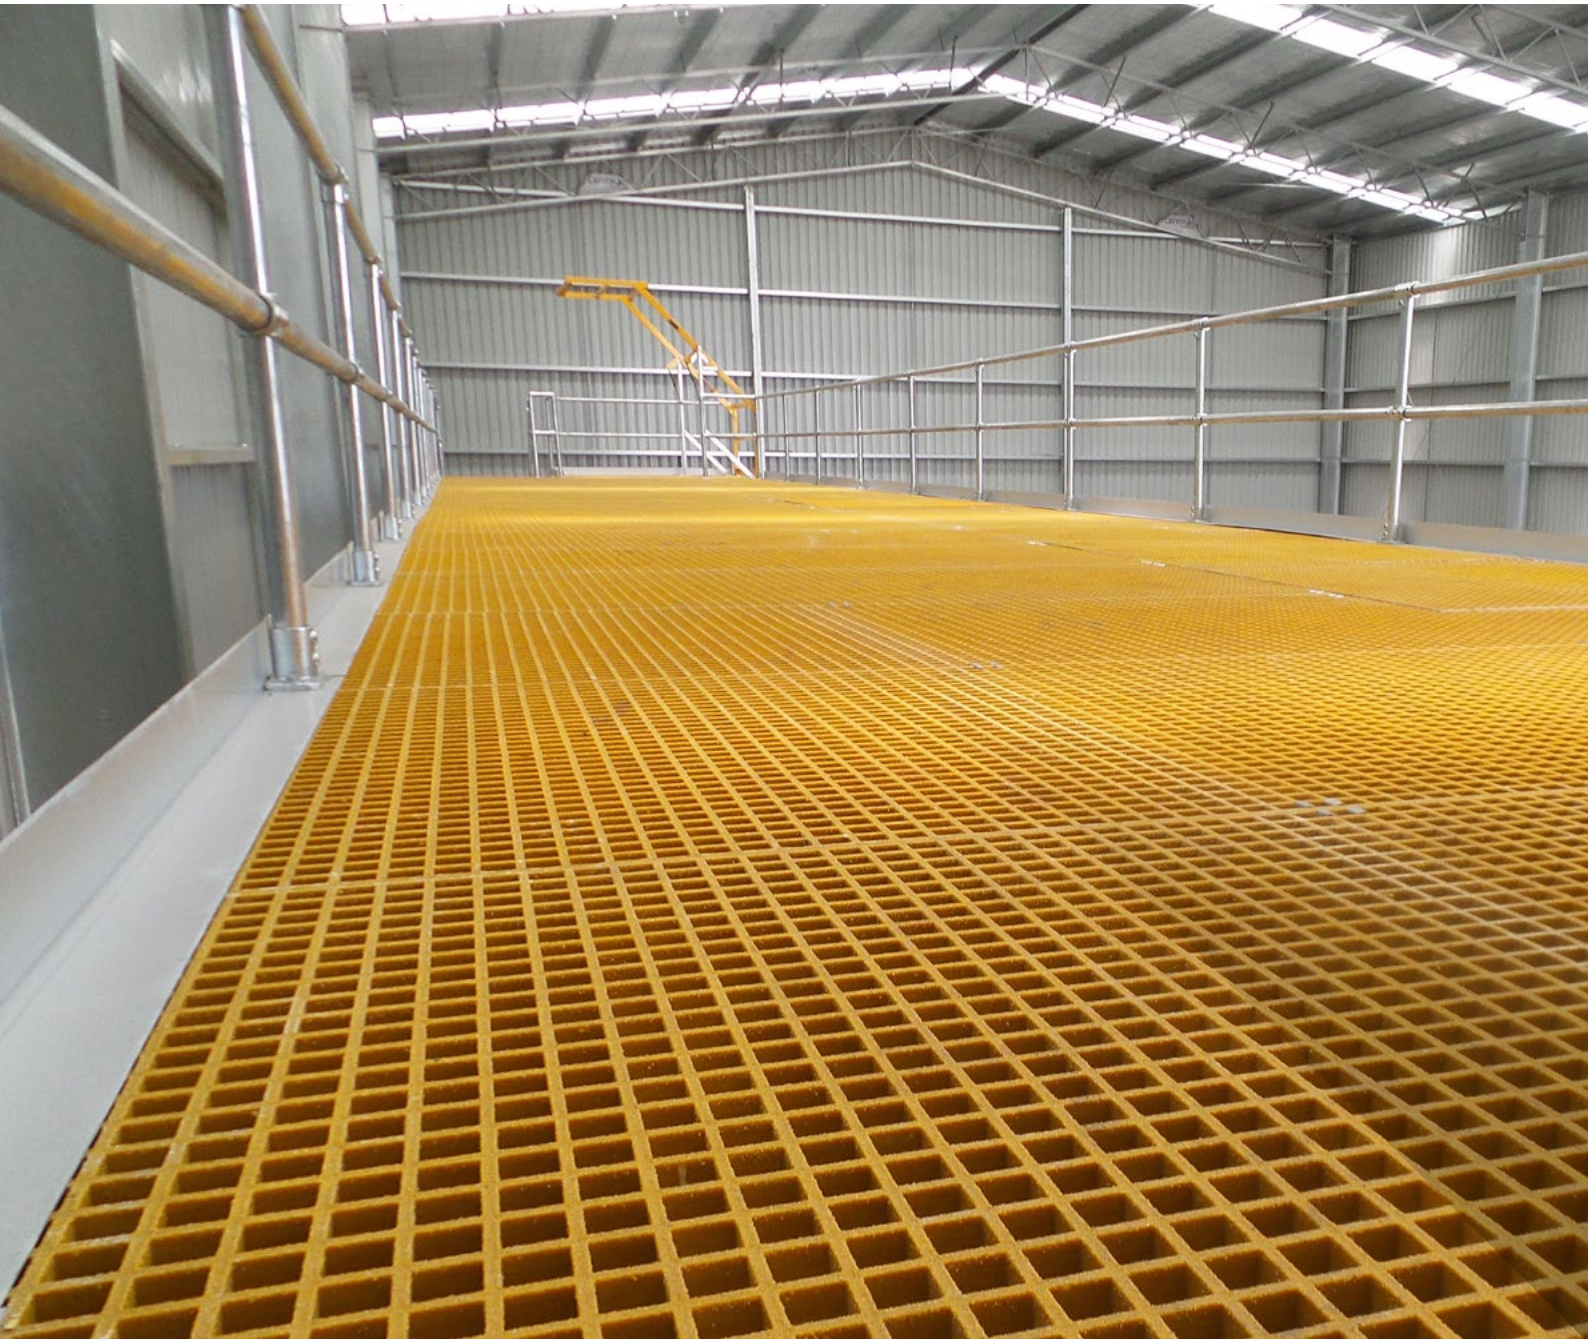

### The Solution:

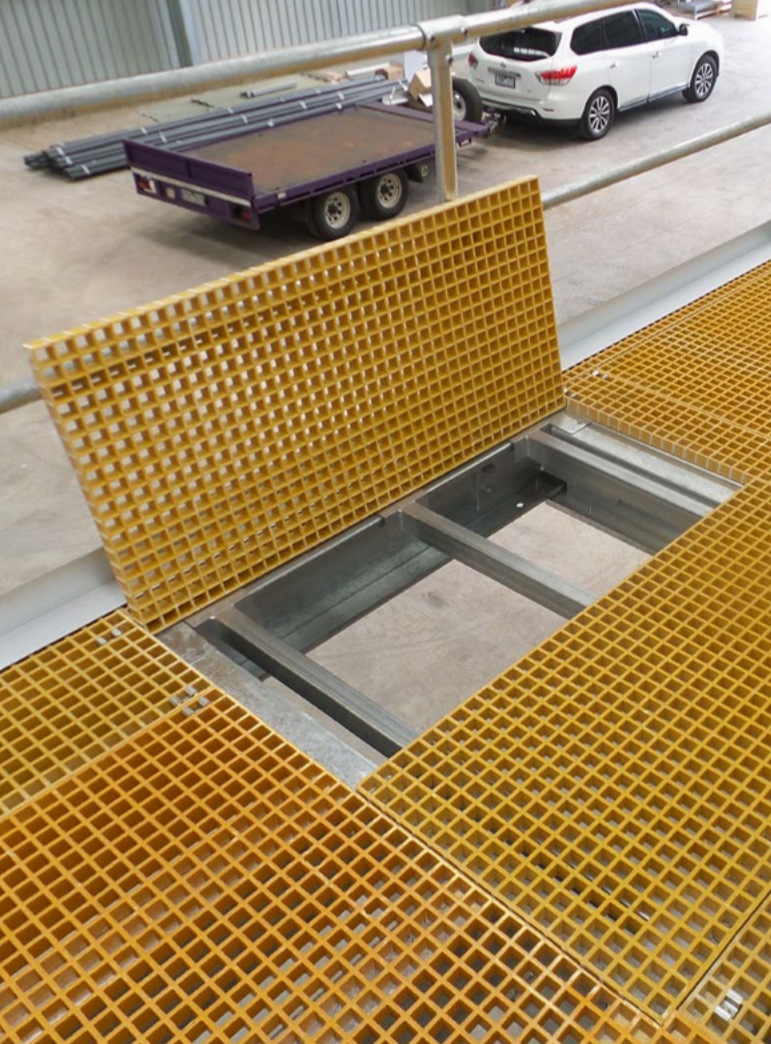

Integrated machinery mezzanine.

## The Problem

Ixom were running low on space, which was impacting on their ability to operate at full efficiency. Due to the nature of their industry, it is crucial that they have a designated plant platform to conduct any necessary operations.

The lack of manufacturing space was taking its toll on operations and Ixom's employees ability to work.

## The Solution

After discussions between Heighton Mezzanines and Ixom, a mezzanine was deemed as the best storage type for the warehouse. The manufacturing solution for Ixom was an integrated machinery mezzanine that would provide an area to assist the business with any manufacturing needs.

## The Outcome

Ixom was provided with an adequate solution that provided both a storage and manufacturing area.
